

Service Management System

1. Access to various services (systems) according to user subscription.
2. Maximizing the usage of JS on client side for visualization.
3. Responsive design that follows accessibility standards.
4. Single Sign-on (e-mail as the unique identifier across systems).
5. Shopping, Billing, Invoicing, Licensing (one subscription may contain multiple licenses, different types of users).
6. Automatically creates/updates user accounts in subscribed services.
7. Customize the subscribed systems (look-and-feel, branding, domain).
8. Add/Configure new add-on systems (e.g., user information migration).
